Comparison Operators

INTERMEDIATE PYTHON

Hugo Bowne-AndersonData Scientist at DataCamp

NumPy recap

```
# Code from Intro to Python for Data Science, Chapter 4
import numpy as np
np_height = np.array([1.73, 1.68, 1.71, 1.89, 1.79])
np_{weight} = np.array([65.4, 59.2, 63.6, 88.4, 68.7])
bmi = np_weight / np_height ** 2
bmi
array([ 21.852, 20.975, 21.75 , 24.747, 21.441])
bmi > 23
array([False, False, False, True, False], dtype=bool)
bmi[bmi > 23]
array([ 24.747])
```

• Comparison operators: how Python values relate

Numeric comparisons

2 < 3

3 <= 3

True

2 == 3

False

2 <= 3

True

True

x = 2

y = 3

x < y

True

Other comparisons

```
"carl" < "chris"
True
3 < "chris"</pre>
TypeError: unorderable types: int() < str()</pre>
3 < 4.1
True
```

Other comparisons

bmi

```
array([21.852, 20.975, 21.75 , 24.747, 21.441])
```

bmi > 23

array([False, False, False, True, False], dtype=bool)

Comparators

| Comparator | Meaning |
|------------|-----------------------|
| < | Strictly less than |
| <= | Less than or equal |
| > | Strictly greater than |
| >= | Greater than or equal |
| == | Equal |
| != | Not equal |

Let's practice!

INTERMEDIATE PYTHON

Boolean Operators

INTERMEDIATE PYTHON

Hugo Bowne-AndersonData Scientist at DataCamp

Boolean Operators

- and
- or
- not

and

True and True False **and** True False True True **and** False x = 12x > 5 and x < 15# True True False True False **and** False False

or

True or True

False or False

True

False

False or True

y = 5

y < 7 or y > 13

True

True

True **or** False

True

not

not True

False

not False

True

NumPy

calculation of bmi left out bmi array([21.852, 20.975, 21.75 , 24.747, 21.441]) bmi > 21 array([True, False, True, True, True], dtype=bool) bmi < 22 array([True, True, True, False, True], dtype=bool) bmi > 21 and bmi < 22 ValueError: The truth value of an array with more than one element is ambiguous. Use a.any() or a.all()

NumPy

- logical_and()
- logical_or()
- logical_not()

```
np.logical_and(bmi > 21, bmi < 22)
```

```
array([True, False, True, False, True], dtype=bool)
```

```
bmi[np.logical_and(bmi > 21, bmi < 22)]</pre>
```

array([21.852, 21.75, 21.441])

Let's practice!

INTERMEDIATE PYTHON

if, elif, else INTERMEDIATE PYTHON

Hugo Bowne-AndersonData Scientist at DataCamp

Overview

- Comparison Operators
 - 0 < , > , >= , <= , !=</pre>
- Boolean Operators
 - o and, or, not
- Conditional Statements
 - o if, else, elif

```
if condition :
    expression
```

control.py

```
z = 4
if z % 2 == 0 :  # True
    print("z is even")
```

z is even

```
if condition :
    expression
```

expression not part of if

control.py

```
z = 4
if z % 2 == 0 :  # True
    print("z is even")
```

z is even

```
if condition :
    expression
```

control.py

```
z = 4
if z % 2 == 0 :
    print("checking " + str(z))
    print("z is even")
```

```
checking 4
z is even
```

```
if condition :
    expression
control.py
z = 5
if z % 2 == 0 : # False
    print("checking " + str(z))
    print("z is even")
```

else

```
if condition :
    expression
else :
    expression
```

control.py

```
z = 5
if z % 2 == 0 :  # False
    print("z is even")
else :
    print("z is odd")
```

z is odd

elif

```
if condition :
    expression
elif condition :
    expression
else :
    expression
```

control.py

```
z = 3
if z % 2 == 0 :
    print("z is divisible by 2")  # False
elif z % 3 == 0 :
    print("z is divisible by 3")  # True
else :
    print("z is neither divisible by 2 nor by 3")
```

```
z is divisible by 3
```

elif

```
if condition :
    expression
elif condition :
    expression
else :
    expression
```

control.py

```
z = 6
if z % 2 == 0 :
    print("z is divisible by 2")  # True
elif z % 3 == 0 :
    print("z is divisible by 3")  # Never reached
else :
    print("z is neither divisible by 2 nor by 3")
```

```
z is divisible by 2
```

Let's practice!

INTERMEDIATE PYTHON

Filtering pandas DataFrames

INTERMEDIATE PYTHON

Hugo Bowne-AndersonData Scientist at DataCamp

brics

```
import pandas as pd
brics = pd.read_csv("path/to/brics.csv", index_col = 0)
brics
```

| _ | country | capital | area | population |
|----|--------------|-----------|--------|------------|
| BR | Brazil | Brasilia | 8.516 | 200.40 |
| RU | Russia | Moscow | 17.100 | 143.50 |
| IN | India | New Delhi | 3.286 | 1252.00 |
| СН | China | Beijing | 9.597 | 1357.00 |
| SA | South Africa | Pretoria | 1.221 | 52.98 |

Goal

| | country | capital | area | population |
|----|--------------|-----------|--------|------------|
| BR | Brazil | Brasilia | 8.516 | 200.40 |
| RU | Russia | Moscow | 17.100 | 143.50 |
| IN | India | New Delhi | 3.286 | 1252.00 |
| СН | China | Beijing | 9.597 | 1357.00 |
| SA | South Africa | Pretoria | 1.221 | 52.98 |
| | | | | |

- Select countries with area over 8 million km2
- 3 steps
 - Select the area column
 - Do comparison on area column
 - Use result to select countries

Step 1: Get column

```
area population
                   capital
        country
BR
         Brazil
                  Brasilia
                            8.516
                                       200.40
         Russia
                    Moscow 17.100
                                     143.50
RU
                                     1252.00
ΙN
          India
                New Delhi
                           3.286
                   Beijing
                                     1357.00
          China
                           9.597
CH
   South Africa
                 Pretoria 1.221
                                       52.98
```

```
brics["area"]
```

```
BR 8.516
RU 17.100
IN 3.286
CH 9.597
SA 1.221
Name: area, dtype: float64 # - Need Pandas Series
```

• Alternatives:

```
brics.loc[:,"area"]
brics.iloc[:,2]
```

Step 2: Compare

```
brics["area"]
      8.516
RU
      17.100
ΙN
      3.286
СН
      9.597
SA
      1.221
Name: area, dtype: float64
brics["area"] > 8
BR
       True
RU
      True
IN
      False
СН
      True
SA
      False
Name: area, dtype: bool
is_huge = brics["area"] > 8
```

Step 3: Subset DF

```
is_huge
```

```
BR True
RU True
IN False
CH True
SA False
Name: area, dtype: bool
```

brics[is_huge]

```
country capital area population
BR Brazil Brasilia 8.516 200.4
RU Russia Moscow 17.100 143.5
CH China Beijing 9.597 1357.0
```

Summary

```
